Acknowledgement of AI Usage

COMP5415/4415 · Multimedia Design & Authoring | BLOOM - From cherry to cup

Anugraha Jawahar | SID: 550859969 · Updated 19 October 2026

PART A – Have you used AI in the completion of this assignment?

YES.

I used two AI tools in this project: ChatGPT and Claude, including Claude Code for the website. Parts B and C set out what each tool did and what I did, consistent with Section 7 of my report.

I have filled in all the details required by the course form. Generative AI input prompts verbatim, their corresponding generated outputs, and an explanation in the student's own English of how each output was used, altered, adopted or developed. It also requires citations for other people's text included in prompts.
The .docx and .pptx were converted to pdf using ChatGPT to prevent the drop in quality of pictures attached and render them in high quality for submission.

Evidence labels

The explanations below are written on my own account of the work and match Section 7 of my report.

PART B – AI Tools used

AI tool	Link	Tasks and reasons
ChatGPT	https://chatgpt.com	Detailed step-by-step Blender instructions for modelling and animation; assistance writing the Python scripts that construct the geometry, assemble the scenes and calculate the animation; detailed steps for the procedural animation and explanations of the advanced concepts used, such as Bezier curves, parenting hierarchies and Alpha Over compositing; fixing my errors and overlaps; altering the pitch of my recorded voice; fetching the music and sound effects (made with Python/NumPy synthesis, not stock recordings); an earlier draft of what should be included in the report; the script archive and prompt log to help me fill this report.
Claude (chat)	https://claude.ai	Ideation for the first-draft storyboard, logo, posters and website; checking whether my concept was feasible in Blender; reviewing my website against UX heuristics; the presentation structure; guidance on updating my report template to match the rubric; writing the report, including rewriting the earlier draft from my account of the work, editing, figure captions, the contents and lists, and the acknowledgement section. Exact chat prompts and outputs remain to be attached.
Claude Code	https://claude.com/claude-code	Enhancing the website after I had made it in HTML, CSS and JavaScript; assisting with the website animations and bee graphics; helping me push the code to GitHub and deploy it on GitHub Pages. Exact session prompts, code changes and deployment records remain to be attached.

Blender, Figma and Canva are authoring tools. Their use alone does not establish generative-AI use. Python/NumPy synthesis describes a technique and ChatGPT assistance was used to write the python scripts to generate procedural animation.

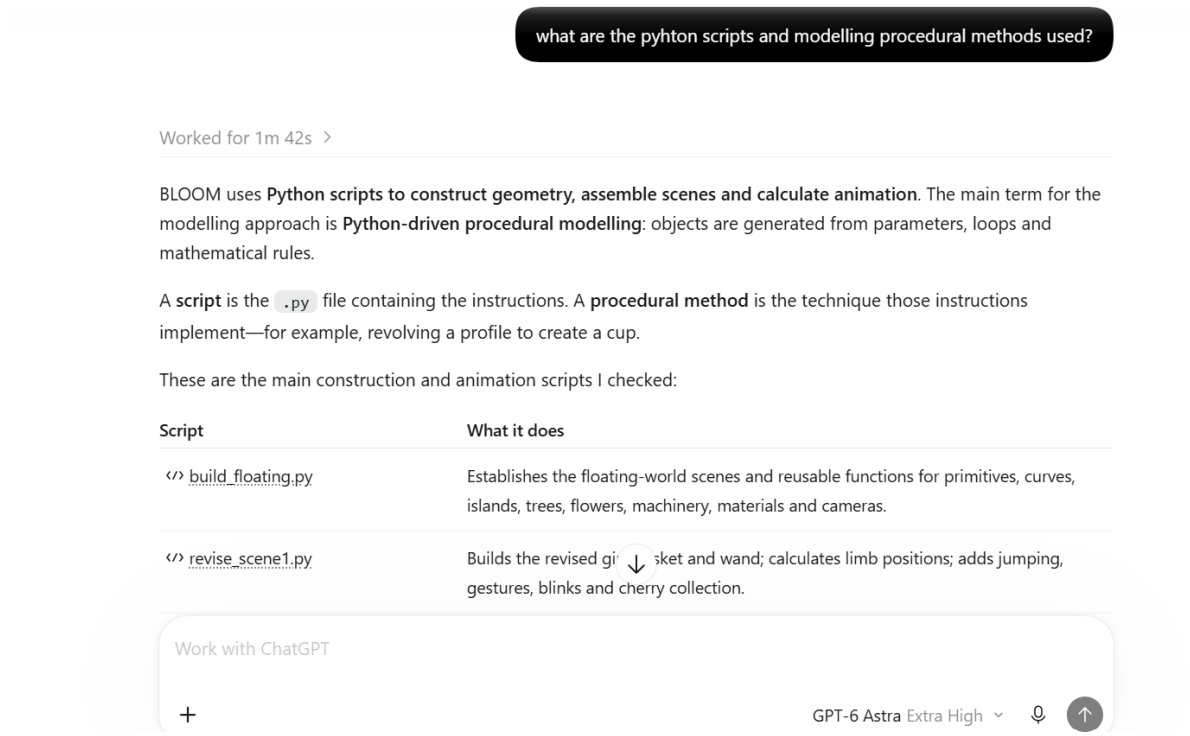

PART C

ChatGPT: Blender production

Prompt IDs refer to Appendix A. Quoted prompts are reproduced there with their source threads. Related requests and outputs are grouped here for readability; this does not imply every historical turn has been recovered.

C1. Modelling guidance and scene construction

AI tool	Input prompt / reference	Corresponding output / reference	Explanation: use and changes
ChatGPT	P01–P20, particularly P14: “pick up the task from where you left off and fix the graphics in my animation as per my mood board and story board ideation for the website on top of my current design.”	Detailed Blender instructions; scene construction and animation scripts, including build_floating.py and revise_scene1.py; the three BLOOM Blender scenes. Script archive identified in the history: BLOOM_All_Python_Scripts.zip.	ChatGPT gave me detailed step-by-step instructions and assisted me in writing the Python scripts for the procedural modelling and animation: build_floating.py sets up the floating-world scenes with reusable functions for primitives, curves, islands, trees, flowers, machinery, materials and cameras, and revise_scene1.py builds the girl, basket and wand and calculates her limb positions, jumping, gestures, blinks and cherry collection. I ran the scripts in Blender to build and animate the three scenes from my own visual direction, supplied progress images, and requested revisions until the scenes matched my mood board and storyboard.

Screenshot: ChatGPT prompt “what are the python scripts and modelling procedural methods used?” and its explanation of the Python scripts and procedural modelling methods, including build_floating.py and revise_scene1.py (C1).

C2. Motion, streams and overlap corrections

AI tool	Input prompt / reference	Corresponding output / reference	Explanation: use and changes
ChatGPT	P10, P19–P20 cover troubleshooting. S02 and S03 describe the girl, hopping, basket/cherries, streams and cameras, but are summaries only; It was used to de-bug my animation	Scene and revision scripts for limb poses, cherry motion, milk and coffee curves; revised Blender scenes and render checks. These are reported output types, not verbatim replies.	When my animation had errors, I shared the renders and ChatGPT helped me debug them, fixing character motion, object overlaps, stream alignment and framing. I applied the corrected scripts in Blender and checked the results.

C3. Character export for poster design

AI tool	Input prompt / reference	Corresponding output / reference	Explanation: use and changes
ChatGPT	P22–P23. P23: “Steps to Render the girl character with her wand as a separate blender file for me export and use in my canva design poster”	Detailed steps to separate BLOOM_Girl_With_Wand.blend; and generate BLOOM_Girl_Wand_Transparent.png, identified in the visible history.	I requested for detailed steps to separate render of the girl and her wand for my poster design. I then made the final poster layout, crops, colour fades and typography myself in Figma.

Compositing and wave animation

C4. Alpha Over compositor

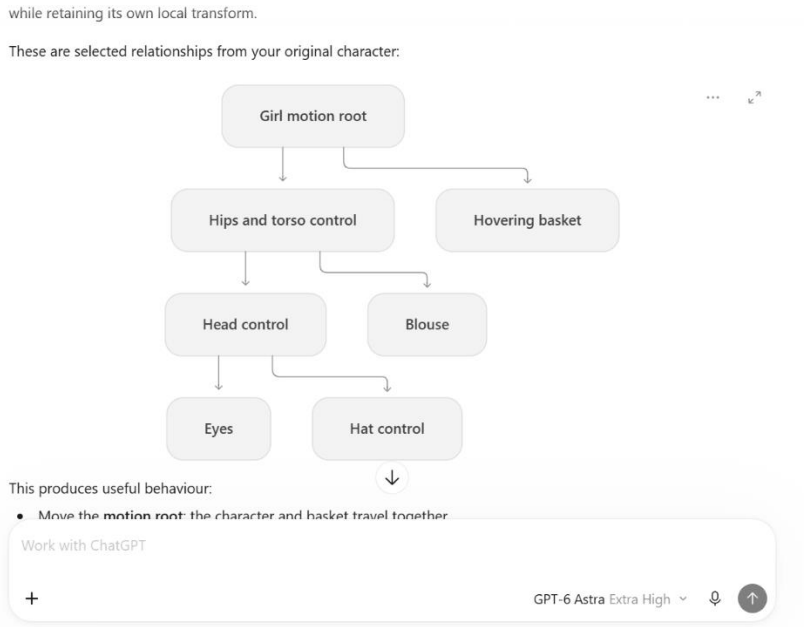

AI tool	Input prompt / reference	Corresponding output / reference	Explanation: use and changes
ChatGPT	P25: “steps to render the girl separately with transparency and combine her with the BLOOM background using Alpha Over” P31 asks whether the full composited sequence was rendered and doable; P32 requests inspection of BLOOM_Scene1.blend.	BLOOM_Scene1_Composited.blend and a frame-280 composite are documented in the earlier working report. The report describes a two-view-layer setup with Alpha Over. The current full-sequence status was not audited in this prompt-log task.	ChatGPT gave compositor guidance for the Alpha Over setup. I set up and explored the compositing myself in Blender, using two view layers to combine the girl with the BLOOM background.

C5. FreeMoCap attempt and Blender wave

AI tool	Input prompt / reference	Corresponding output / reference	Explanation: use and changes
ChatGPT	P28: “me trying to implement wave via freemocap, but laptop kept crashing or taking forever to load, so I implemented the animation in blender. Add this to the report”	Updated report text in BLOOM_Working_Report_Draft.pdf / .docx, recording the failed FreeMoCap attempt and the Blender keyframed alternative.	I tried to implement the wave with FreeMoCap, but my laptop kept crashing or taking too long to process, so I keyframed the wave by hand in Blender. I asked ChatGPT to record this in the report draft.

Division of work

ChatGPT gave me detailed steps for the procedural animation, explained the advanced concepts used, such as the parenting hierarchy that links the girl's motion root to her hips and torso, head, eyes, hat and hovering basket, and assisted me in writing and debugging the scripts. I ran and adjusted these in Blender to build and animate the scenes, and keyframed the wave by hand. This matches the division of work in Section 7 of my report.

Screenshot: ChatGPT's explanation of the parenting hierarchy used for the girl character (Division of work).

Narration, audio and documentation

C6. Narration and recorded-voice processing

AI tool	Input prompt / reference	Corresponding output / reference	Explanation: use and changes
ChatGPT	P21 and P24 request the script/source. P30: “change the pace if needed, to match the previous versions” The full original pitch-processing request is not recovered.	Pitch-adjusted version of my own recorded narration, identified in the history as BLOOM_Own_Voice_Narration.zip.	I wrote the narration script and recorded the voiceover myself. The final narration uses my original voice; ChatGPT only adjusted its pitch. No synthesised voice was used.

C7. Music, effects and separate Canva media

AI tool	Input prompt / reference	Corresponding output / reference	Explanation: use and changes
ChatGPT	P29: “give me all the audio files separately, the sound effects, the audio narration and the video without any sound for all the three scenes, final version. I am manually going to edit it in Canva” P35 requests source/licence confirmation; it is not the original music-generation prompt.	BLOOM_Canva_Editing_Package.zip, identified in history. The supplied acknowledgement describes Python/NumPy-synthesised music and effects. The original synthesis prompt and source code have not been checked in this task.	ChatGPT fetched the music and sound effects, made with Python/NumPy synthesis rather than stock recordings, and supplied the audio and silent video separately. I synced the audio to the video and mixed the narration, music and effects myself in Canva.

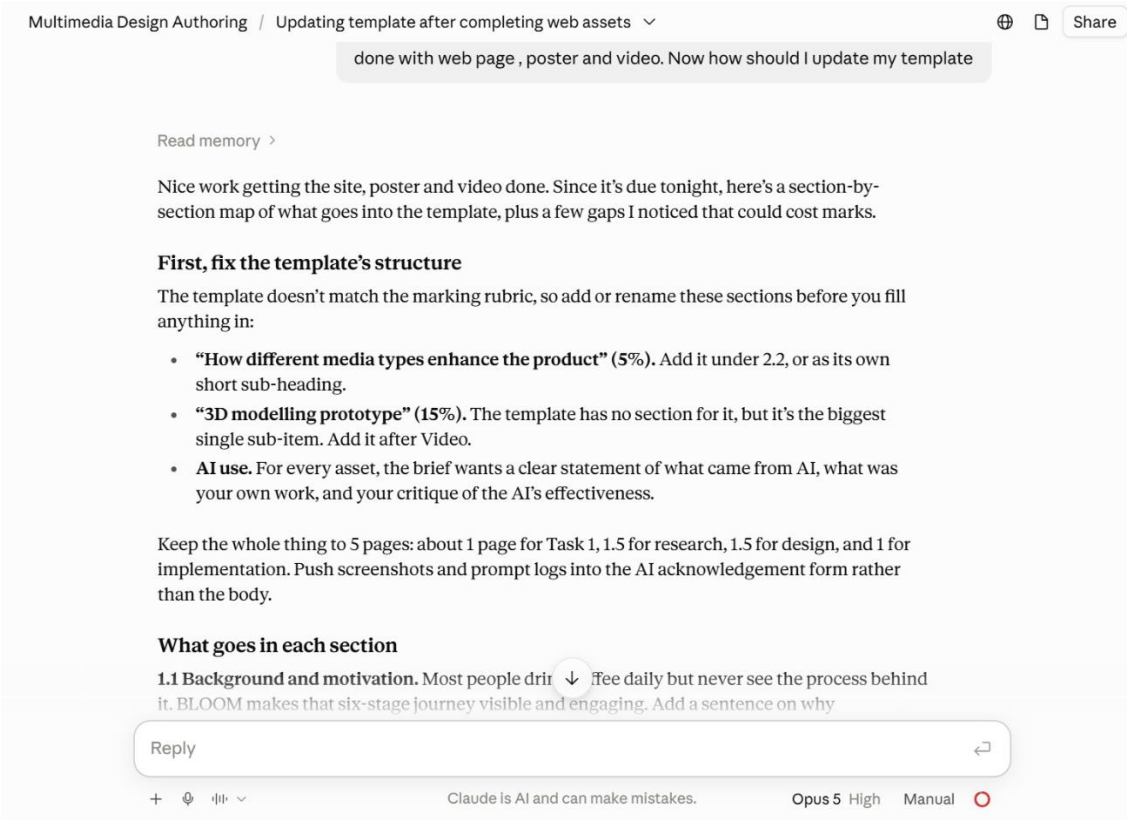

C8. Report, presentation and archive

AI tool	Input prompt / reference	Corresponding output / reference	Explanation: use and changes
ChatGPT	P26 requests documentation/presentation preparation; P28 adds the FreeMoCap account; P36 requests the Python archive. Current prompt: “give me the prompt log used in this project”.	BLOOM_Prep_Package.zip; BLOOM_Presentation_and_Demo_Guide.docx; BLOOM_All_Python_Scripts_guide.zip; this update instruction for acknowledgement and Appendix A.	Used the log and these details to write this report.

Claude chat

The following uses are retained from the supplied acknowledgement. Exact Claude prompts and outputs have not been recovered; ChatGPT prompts must not be relabelled as Claude prompts.

AI tool / task	Input prompt	Corresponding AI output	Explanation
Claude (chat) C9. Storyboard	"Verify my idea and tell me if it feasible to do in blender". Other storyboard prompts:	Ideas for the first-draft storyboard; a check of whether my concept was feasible to build in Blender	I directed the ideas and designed the first-draft storyboard in Figma, using mood-board images I gathered myself.
Claude (chat) C10. Logo	"Assess my logo and tell me how it can be improved"	Logo ideas.	I designed and made the logo myself in Figma.
Claude (chat) C11. Posters	"From the mood board given generate poster ideas for my website"	Poster ideas	I designed and made the final three posters in Figma from my own Blender renders, with my own crops, colour fades and typography.
Claude (chat) C12. Website ideation	"Verify if my website as per UX heuristics". Other website prompts:	Early coffee-journey concept, clickable cup landing and page-structure ideas; a review of my website against UX heuristics. Original output missing.	I directed the ideas and made the website myself, supplying the content, media and credits. I used the UX heuristic review to check my design and decided which suggestions to apply.
Claude (chat) C13. Presentation	The presentation documentation was attached to the chat and asked how to structure my presentation.	Presentation structure.	I reworked and finished the slides in Canva.
Claude (chat) C14. Report and acknowledgement	"Done with web page, poster and video. Now how should I update my template" (screenshot below).	Guidance on updating my report template to make corrections as per the marking rubric: adding sections for how different media types enhance the product and the 3D modelling prototype, an AI-use statement for each asset, a five-page budget and what goes in each section. Also rewriting the earlier report draft from my account of the work, editing, figure captions, the contents and lists, and the acknowledgement section.	I supplied my own work and checked the final text.

Screenshot: Claude chat prompt "done with web page , poster and video. Now how should I update my template" and the start of Claude's reply on the report structure (C14).

AI tool / task	Input prompt	Corresponding AI output	Explanation
Claude Code C15. Website enhancement	MISSING exact session instructions and follow-ups.	Enhancements to the website I had made in HTML, CSS and JavaScript, including the enhanced landing banner; original patches/outputs not included.	I made the website in HTML, CSS and JavaScript, then directed and checked Claude Code's enhancements.
Claude Code C16. Website animations	MISSING exact prompts for each interaction.	Website animations (floating cup, steam/pour, clouds, scroll reveals and episode crossfade) and the bee graphics.	I directed the animations and bee graphics and tested the interactions myself.
Claude Code C17. GitHub and deployment	MISSING deployment instructions and session output.	Repository changes and GitHub Pages deployment, as declared in the supplied acknowledgement; no repository/session records checked here.	I chose to publish the site, directed the push to GitHub and the deployment, and checked the live link.

Personal work and AI-assisted stages

In line with Section 7 of my report, I made these parts without AI help: the three-episode story and the narration script; the narration voice, which I recorded myself (ChatGPT only altered its pitch); the mood board; the Blender scenes and character animation, including the wave, which I keyframed by hand after the FreeMoCap attempt; the final logo and poster artwork in Figma, built from my own Blender renders; the website code in HTML, CSS and JavaScript (Claude only helped enhance and deploy it and add the animations and bee graphics); and the Canva edit, including syncing, mixing and hand-timed captions.

These parts build on the AI-assisted stages declared in Parts B and C: ChatGPT's Blender instructions, scripts, compositor guidance, voice pitch processing and synthesised audio, and Claude assisted ideation, website enhancements, presentation structure and writing assistance. All the blender file animations were verified by ChatGPT to test if the steps have been correctly followed and the output was fetched as expected.

Declaration

This Acknowledgement is filled by me (Anugraha) in my own words and added the prompts used in AI manually. I hereby confirm that the final submission was done completely by me under my supervised use of AI, confirming the responsible use of AI.
